Comments

Equipment build: 7mm suit + vest w/hood; one light; 131lbs weight; camera with strobe,

Great dive at 120 today. Could see the rocks from the ridge and the water was calm so we knew it would be good. Once again I got the low battery light as soon as I powered it up. Batteries all had 1.38 volts so I tried cleaning the terminals once I got home. Will see what that will do. In any case, vis was 15ft or so despite no sunshine. Saw a brittle star crawling around a sunstar. I tried putting the brittlestar on the sunstar since sunstars are supposed to eat them but no results. Busted up some urchins and just enjoyed all the life on the reef. Saw one cluster of 4 spanish shawls which was really cool. All in all a great dive.
