Salt Water

Site: 120 deg reef, east side

Buddy: PSD

Comments

Equipment build: 7mm suit + vest w/hood; one light; 131lbs weight; camera no strobe,

9 divers at OML today. Paired up with PSD and headed to 120. Went to the farther east side just to see what was there. Not as much structure or critters but still explorable. Saw a trap with a half eaten lobster, some really cool nudibranchs, the usual assortment of fish. After a bit we hit the "finger" as that was also on my to do list. Not a bad spot when the surge permits though it doesn't hold a candle to the main reef. Now I know, the main reef is the best area to explore.
